### OUTBACK ROOF RACKS

The Warrior Products Outback rack system is the perfect roof top carrier for all of your gear, with a weight capacity of 400 lbs highway and 150 lbs off-road. The rack is constructed of 1" tubular steel and powder-coated black for lasting durability.

### OUTBACK ROOF RACK MOUNTING KITS

Mounting Kits come in four, six or eight-piece brackets, depending on the overall size of the rack. Each bracket permanently mounts to the roof of the vehicle.

### AUXILIARY LIGHT BRACKETS

Our Auxiliary Light Brackets allow custom placement of lights on any round tubing, from 1" to 2" in diameter. Manufactured in steel, these brackets are powder-coated in a durable black finish.

### HI-LIFT JACK BRACKETS

These brackets allow the popular Hi-Lift Jack product to be mounted to the side of our Safari Rack's cargo basket, or to any flat surface 3" or taller. Manufactured in steel, these products are powder-coated in a durable black finish.

### SHOVEL & AXE MOUNTS

The Shovel & Axe Mount brackets are designed to fit our Safari Rack baskets, to carry a standard shovel and/or axe atop the vehicle. They are constructed of steel and powder-coated black for good looks and lasting durability.

### SPARE TIRE BRACKET

Our universal Spare Tire Bracket can be installed on the Safari Rack baskets, or any stout surface; i.e. the floor of the Jeep's rear tub when the back seat is removed. The bracket and handle are constructed of steel. Its removable handle is zinc-plated, while its base is black powder-coated for good looks and lasting durability.

### AIR DAM

For a quieter, more aerodynamic ride, the Air Dam is designed to redirect wind over and above any of our popular rack series; i.e. Safari. Constructed of 12-gauge steel and powder-coated black for good looks and lasting durability.

### COMBO & HAND GRIPS

Combo and individual Hand Grips fit 3" diameter tubing and have adjustable straps to attach anywhere on the safety cage of the vehicle. The Combo Grip can hold a fire extinguisher and has one detachable Hand Grip.

### 2009 Specialty Vehicles

### Lifestyle Protection

Warrior Products, best known for its line of body armor, bumpers, rack systems and door accessories for Jeep vehicles, offers a broad selection of bolt-on products for truck, SUV and specialty applications as well. And best of all, products are designed, serviced and manufactured right here in the United States.

### REMOVABLE SPARE TIRE CARRIER

This carrier has a quick release on/off head in which to load and/or remove the tire. There's an additional quick release head at its base that allows the entire unit to be removed in seconds! Constructed of 12-gauge steel, the carrier mounts to any flat sheet metal surface, and adjusts to hold up to a 44" tire diameter.

### ROCK CRAWLER DIFFERENTIAL GUARD

A must have for protecting your differential, this guard fits over the factory differential plate to provide maximum protection from rocks, stumps, or anything else encountered on the trail. Powder-coated in a protective hammertone gray finish, there are models to fit a variety of axles.

### UNIVERSAL MUD FLAPS

Available with or without the rubber flap, these Universal Mud Flaps help minimize road debris from plastering the driver behind you, and keep material from the tires directed to the road. The stand alone Mud Flap Bracket is fully adjustable to accept different sizes of flaps.

Hammertone Gray Finish

Gold Zinc Finish

## SPRING PERCHES

Weld-on leaf Spring Perches are a must for converting springs to an over-axle tube application, or for replacing collapsed perches. Sold in pairs, they work well for installing wide springs, or relocating them altogether.

## SPRING-OVER CONVERSION KITS

Our Spring-Over Conversion Kits come complete with spring perches, universal U-bolt plates, universal shock mounts, shock bolts, and coupling nuts. This kit works on most axle applications.

## SHOCK MOUNT CONVERSIONS

Factory stem-style shock mounts are notorious for breaking, so these steel-formed parts convert a post to an eye-mount, for greater durability and functionality. Available in sets of two, with or without bolts and sleeves.

## SHOCK ABSORBER CROSS PINS

Cross Pins are of a solid one-piece construction, that replace worn or broken pins atop shocks. Warrior offers three sizes to fit holes: 2 3/8", 3 1/8" and 3 5/16".

## UNIVERSAL SHOCK BRACKETS

These versatile brackets allow maximum flexibility when re-building your suspension system. Precision formed and manufactured from 1/4" steel plate, brackets are sold two in a set to fit a single shock.

## LEAF SPRING SHACKLE KITS

MIG-welded and jig-built, Spring Shackles come complete with all the mounting hardware required for an easy installation. Shackle Kits lift one end of the vehicle from 1/2" up to 2", depending on the application. Kits come in pairs and are available in either hammertone gray or gold zinc finishes.

## GREASEABLE SHACKLES

This unique suspension system comes complete with lock nuts, polyurethane bushings, drilled sleeves (where needed), and hardened bolts with greaseable fittings. Our shackles allow a lift from 1/2" to 2", depending on the application. Kits come in pairs and are available in hammertone gray or gold zinc finishes.

## GREASEABLE BOLTS

A Greaseable Bolt allows one to lubricate the urethane and/or rubber bushings to both extend its useful life, and to keep them from squeaking. Bolts and nuts sold in pairs.

## CLASS III TOW BARS – COLLAPSIBLE & FIXED

Our rugged Tow Bars have a 5000 lb towing capacity, are manufactured of steel, jig-welded, and powder-coated black for lasting durability. One model is fully collapsible for easy storage and/or removal when not in use, while the fixed version is a permanent mount. The locking coupler is designed for any universal 2" ball mount, and both can be attached using our Tow Bar Mounting Brackets. The latter brackets come complete in the fixed version, but sold separately for the collapsible model.

## TOW BAR MOUNTING BRACKETS

For use with either of our Tow Bars, these heavy-duty brackets are designed to attach to any non-factory steel bumper. They work well on any flat surface of a vehicle as its mounting point.

## UNIVERSAL D-RINGS

Constructed of 1 x 2" solid bar on a 3/8" mounting plate, these heavy-duty universal D-rings are sold in pairs.

## UNIVERSAL U-BOLT PLATES

Our Universal U-bolt Plates are constructed of steel and available in standard (1/4") and heavy-duty (3/8") 4-wheel drive applications.

## LEAF SPRING U-BOLT SKID PLATES

These Skid Plates are designed with an innovative screw-in shock stud feature. This stud can be unscrewed and replaced if and when bent, saving time and the need to replace the entire skid plate.

## UNIVERSAL TRACTION BAR

For small cars and trucks that have leaf springs under the axle, this Bar helps reduce wheel hop. The kit comes complete with four U-bolts, a polyurethane bump stop, and all hardware for an easy installation. Bars available in three finishes.

## FRAME BRACES

For '73 - 91 2 & 4-wheel drive GMC, Chevrolet & Blazer trucks, these Frame Braces are designed to provide additional support to and/or repair cracked frames behind the steering box. Requires welding.

## UNIVERSAL BED STIFFENER

Bed Stiffeners provide support to the pickup's bed when off-road, plus give that 'pre-runner' look.
